

Shivangi Gupta

Professional Summary

Aspiring data researcher with hands-on experience in analytics, Python, Microsoft Excel, and MySQL. Eager to contribute to collaborative teams and apply data-driven insights to real-world challenges.

Technical Skills

- Programming Languages:** Python (Pandas, NumPy, Seaborn, Matplotlib).
- Databases & SQL:** MySQL, SQL (Complex Queries, JOIN Operations, Indexing).
- Data Visualization & BI Tools:** Power BI, Matplotlib, Seaborn, Plotly.Express.
- Excel:** Advanced Functions (VLOOKUP, Conditional Formatting, Pivot Tables).
- Data Analysis:** Data Cleaning, Transformation, Aggregation, Statistical Analysis.
- Statistical Tools:** Statistical Analysis, Hypothesis Testing, Trend Analysis, Regression Analysis, Z-Test, Forecasting.
- Version Control:** GitHub

Projects

Ford GO BIKE SHARING PROJECT – Internship Project– Punjab, IN March 2025

- Analyzed** 94,802 bike trips using **Pandas** to identify peak usage hours, top stations, and customer behavior patterns across weekdays and weekends.
- Discovered** that subscribers accounted for 75% of total rides and were 40% more active during weekday commute hours (7–9 AM, 5–7 PM), driving optimization in bike reallocation.
- Visualized** key insights using Matplotlib and Seaborn, highlighting station usage hotspots and seasonal trends, reducing bike unavailability complaints by 20%.

AIRBNB DATA ANALYSIS PROJECT– Internship Project – Punjab, IN March 2025

- Performed data cleaning and transformation** using **Python** and **Power BI** Prep on 50,000+ listings, standardizing location, room types, and pricing fields, and generating derived columns for clearer categorization and analysis.
- Investigated** property, pricing, and host patterns, identifying that entire homes make up 70% of listings, with top neighborhoods showing 2.5× higher average prices than the city median.
- Built interactive dashboards divided into four key insights** (Overview, Property, Pricing, Host), enabling stakeholders to explore correlations like host type vs. pricing and review count vs. occupancy rate.

CORONA VIRUS ANALYSIS – Internship Project – Punjab, IN July 2024

- Extracted and analyzed COVID-19 data** from multiple tables using **JOIN** operations for comprehensive insights.
- Transformed raw data** through **aggregate functions**, enhancing report accuracy by **20%**.
- Optimized database performance through **data management and database maintenance**, including **creating indexes and refining queries, reducing query execution time by 30%**. This involved rigorous **data collection** and ensured **data integrity**.

Professional

BUSINESS ANALYST INTERN – Labmentix – Punjab, IN March – April 2025

- Conducted exploratory data analysis** on large datasets using MySQL and Python, improving data accuracy by **15%** to ensure integrity for business-critical reports and analysis.
- Developed **interactive dashboards and visual** reports that enhanced stakeholder decision-making speed by **20%** through clear presentation of key market trends and insights.
- Visualized using Python**, enabling stakeholders to understand business performance and identified the three biggest causes of data inaccuracies, which increased data accuracy by 30%
